DEPTH AND ATMOSPHERE

ELEGANCE OF DARK WOOD IN THE SAUNA

Black surfaces create a calming atmosphere, allowing the mind to relax in the tranquil setting of the sauna.

ELEGANCE OF DARK WOOD IN THE SAUNA

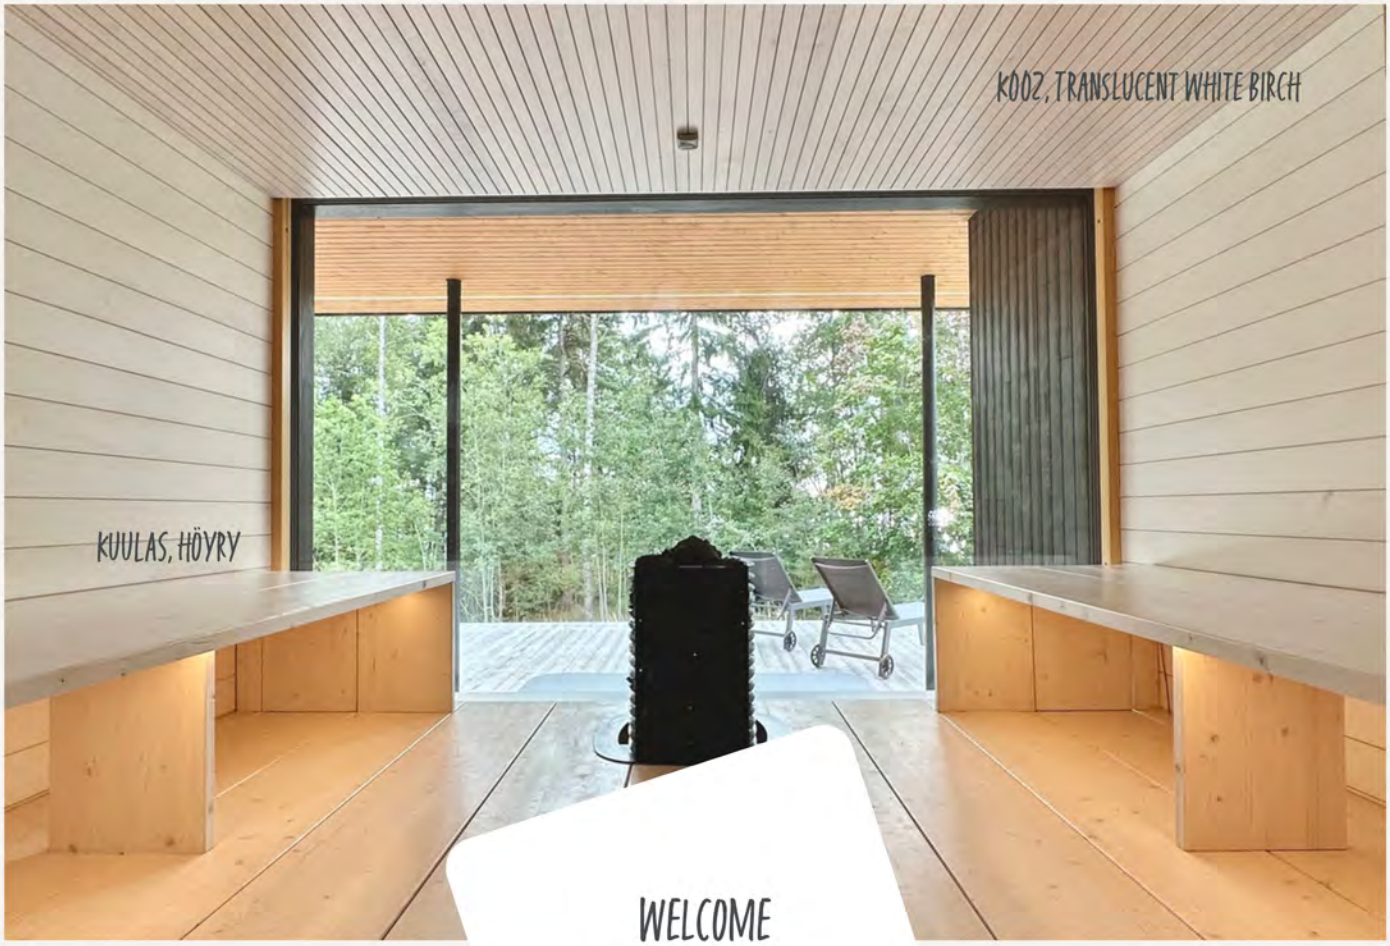

Experience the perfect blend of dim lighting and soothing warmth in the sauna. The STRUKTUURI panel, with black surface treatment, beautifully emphasizes the unique grain and knots of the spruce. The KUULAS panels exude elegance with their shimmering aspen grain, evoking the enchanting northern lights. Enhance the beauty of dark panel surfaces by adding light-colored or thermally modified wooden sauna benches, creating a stunning contrast that elevates your sauna experience.

LIGHT BATHROOMS

NATURAL BEAUTY

Bright, light-colored bathrooms invite an abundance of natural light. The translucent white finish on the panels beautifully combines the warmth of wood with a sleek, modern elegance, creating a soothing and inviting atmosphere.

WELCOME

NATURAL LIGHT IN

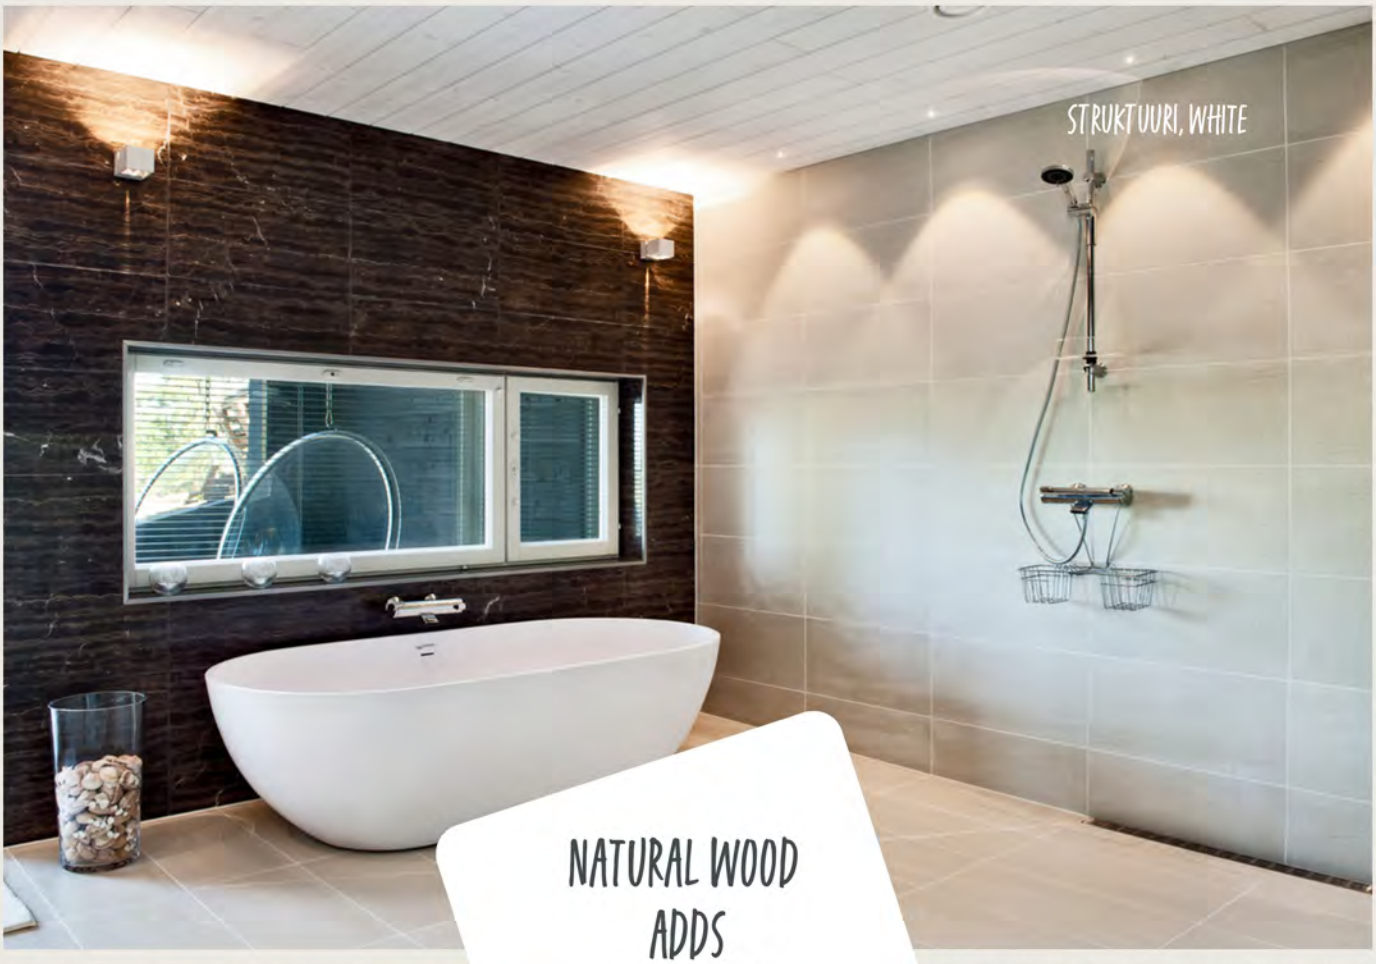

Transform your bathroom interiors by using narrower panels on the ceiling and wider ones on the walls. This thoughtful design choice can create striking details that elevate your space. Additionally, consider the installation direction: horizontal paneling adds a sense of width, and vertically installed panels can significantly enhance the feeling of height, making your bathroom appear more spacious and inviting.

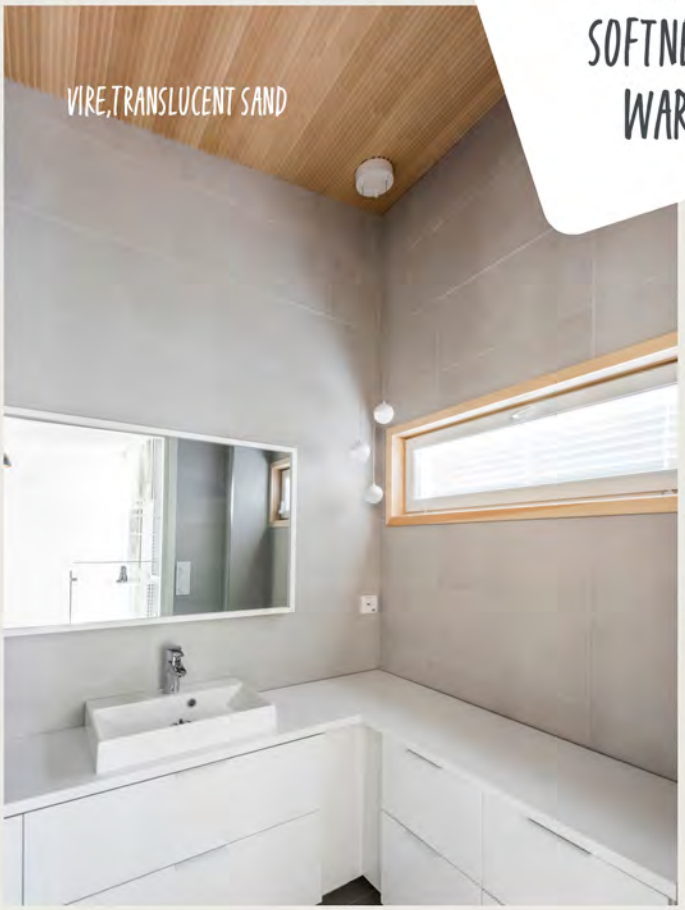

COMBINING MATERIALS

MARBLE, WOOD, AND CONCRETE

Natural wood, along with tiles, marble, and other materials, creates a unified space that promotes relaxation.

NATURAL WOOD ADDS SOFTNESS AND WARMTH

Wood brings a unique warmth and inviting coziness to tile surfaces, transforming any space into a haven. The translucent, sand-toned USVA and VIRE panels create a stunning, harmonious atmosphere when paired with elegant grey tiles. The JALO panel, crafted from ash wood, complements marble beautifully. Beyond their aesthetic appeal, these wooden elements enhance bathroom acoustics by minimizing echoes, making your experience more enjoyable.

Embrace the beauty and functionality of wood in your home!

To enhance the overall aesthetic and ambiance, it's highly advisable to extend the sauna's surface material onto the washroom ceiling. This approach creates a harmonious and seamless connection between both spaces, elevating the design and experience.

CREATE A CALMING ATMOSPHERE WITH NATURAL COLORS.

Wood is a natural material, ensuring that each panel boasts a distinctive appearance. This quality shines through especially in translucent shades, where subtle color variations between panels add to their charm and character

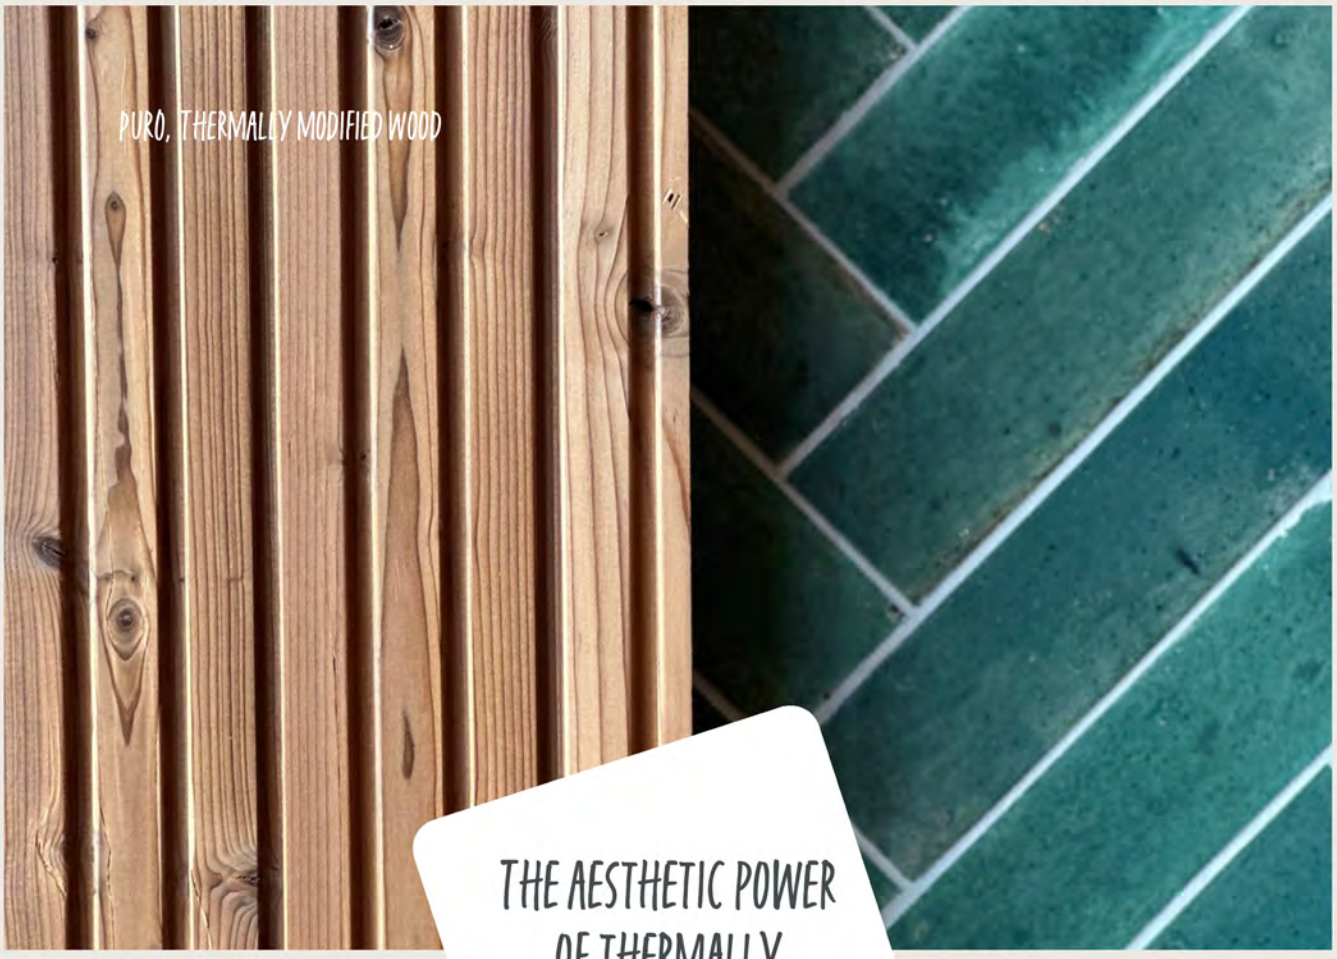

SÖLA, THERMALLY MODIFIED WOOD

THE STRONG SPIRIT OF WOOD

THERMALLY MODIFIED WOOD IN THE SAUNA

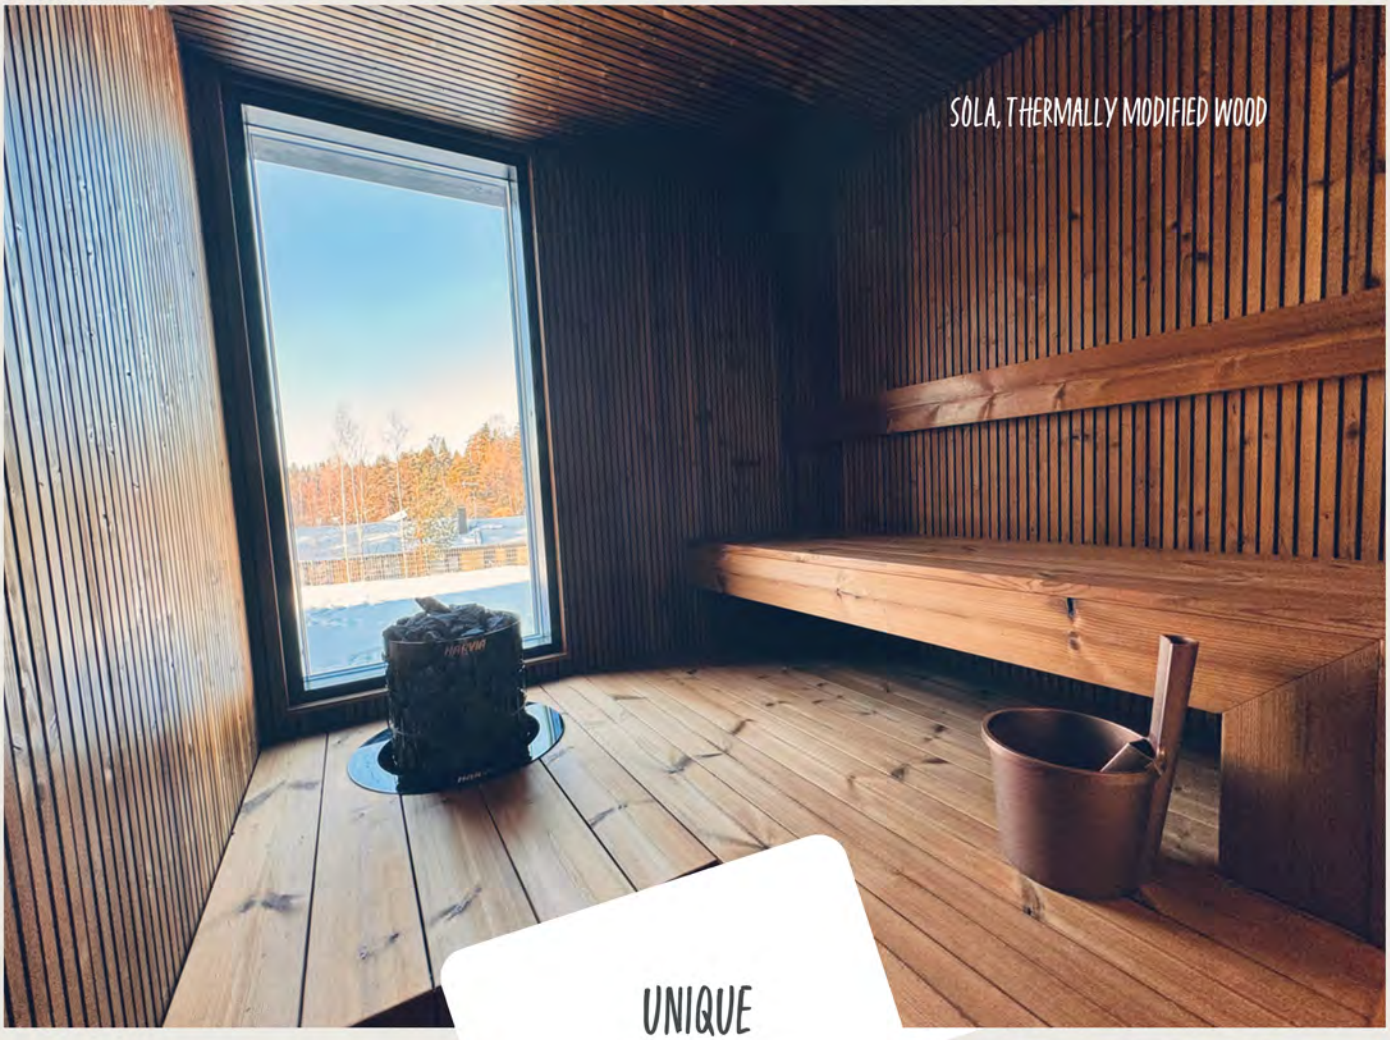

Thermally modified wood transforms your sauna experience into something exceptional. Its rich brown hue elegantly highlights the wood's unique grain, while its inviting aroma encourages you to relax and savor the moment.

THE AESTHETIC POWER OF THERMALLY MODIFIED WOOD.

Thermally modified wood is an excellent choice for environmentally conscious decorators. This wood is treated using only heat and steam, with no chemicals involved. The thermal modification process improves the wood's resistance to moisture and decay, making it a durable material ideal for sauna and bathroom interiors.

UNIQUE APPEARANCE

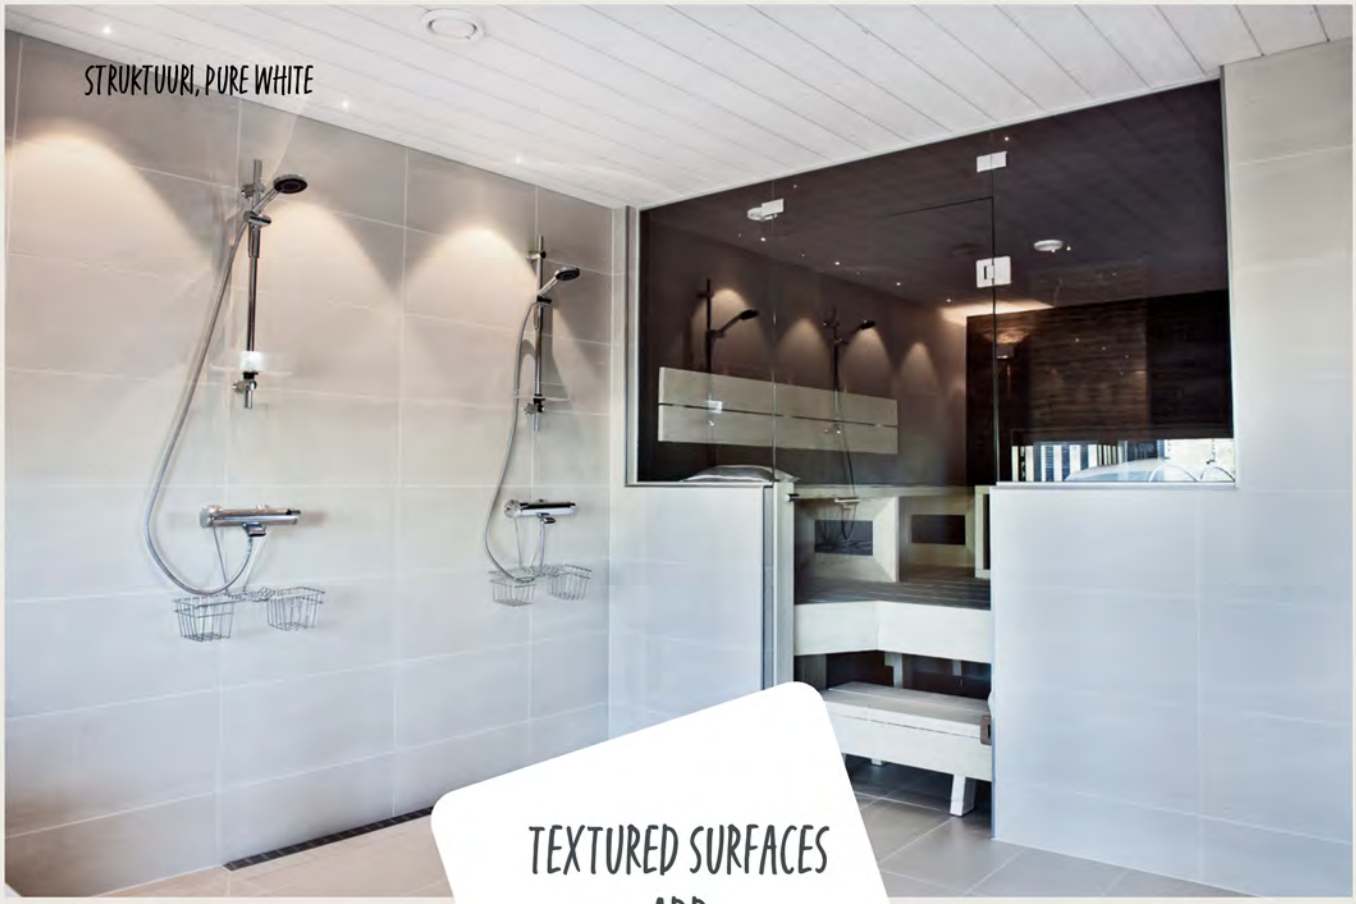

The SOLA panels boast a slat-like surface that effortlessly elevates the ambiance of sauna interiors. The elegantly treated black faux grooves not only enhance depth but also create a stunning match for black bathroom fixtures. Plus, with their design optimized for hidden fastening, these panels ensure exceptional moisture resistance, making them a smart choice for any space.

THE POWER OF WOOD

IN BATHROOM DESIGN

A well-designed bathroom combines both aesthetic appeal and functionality.

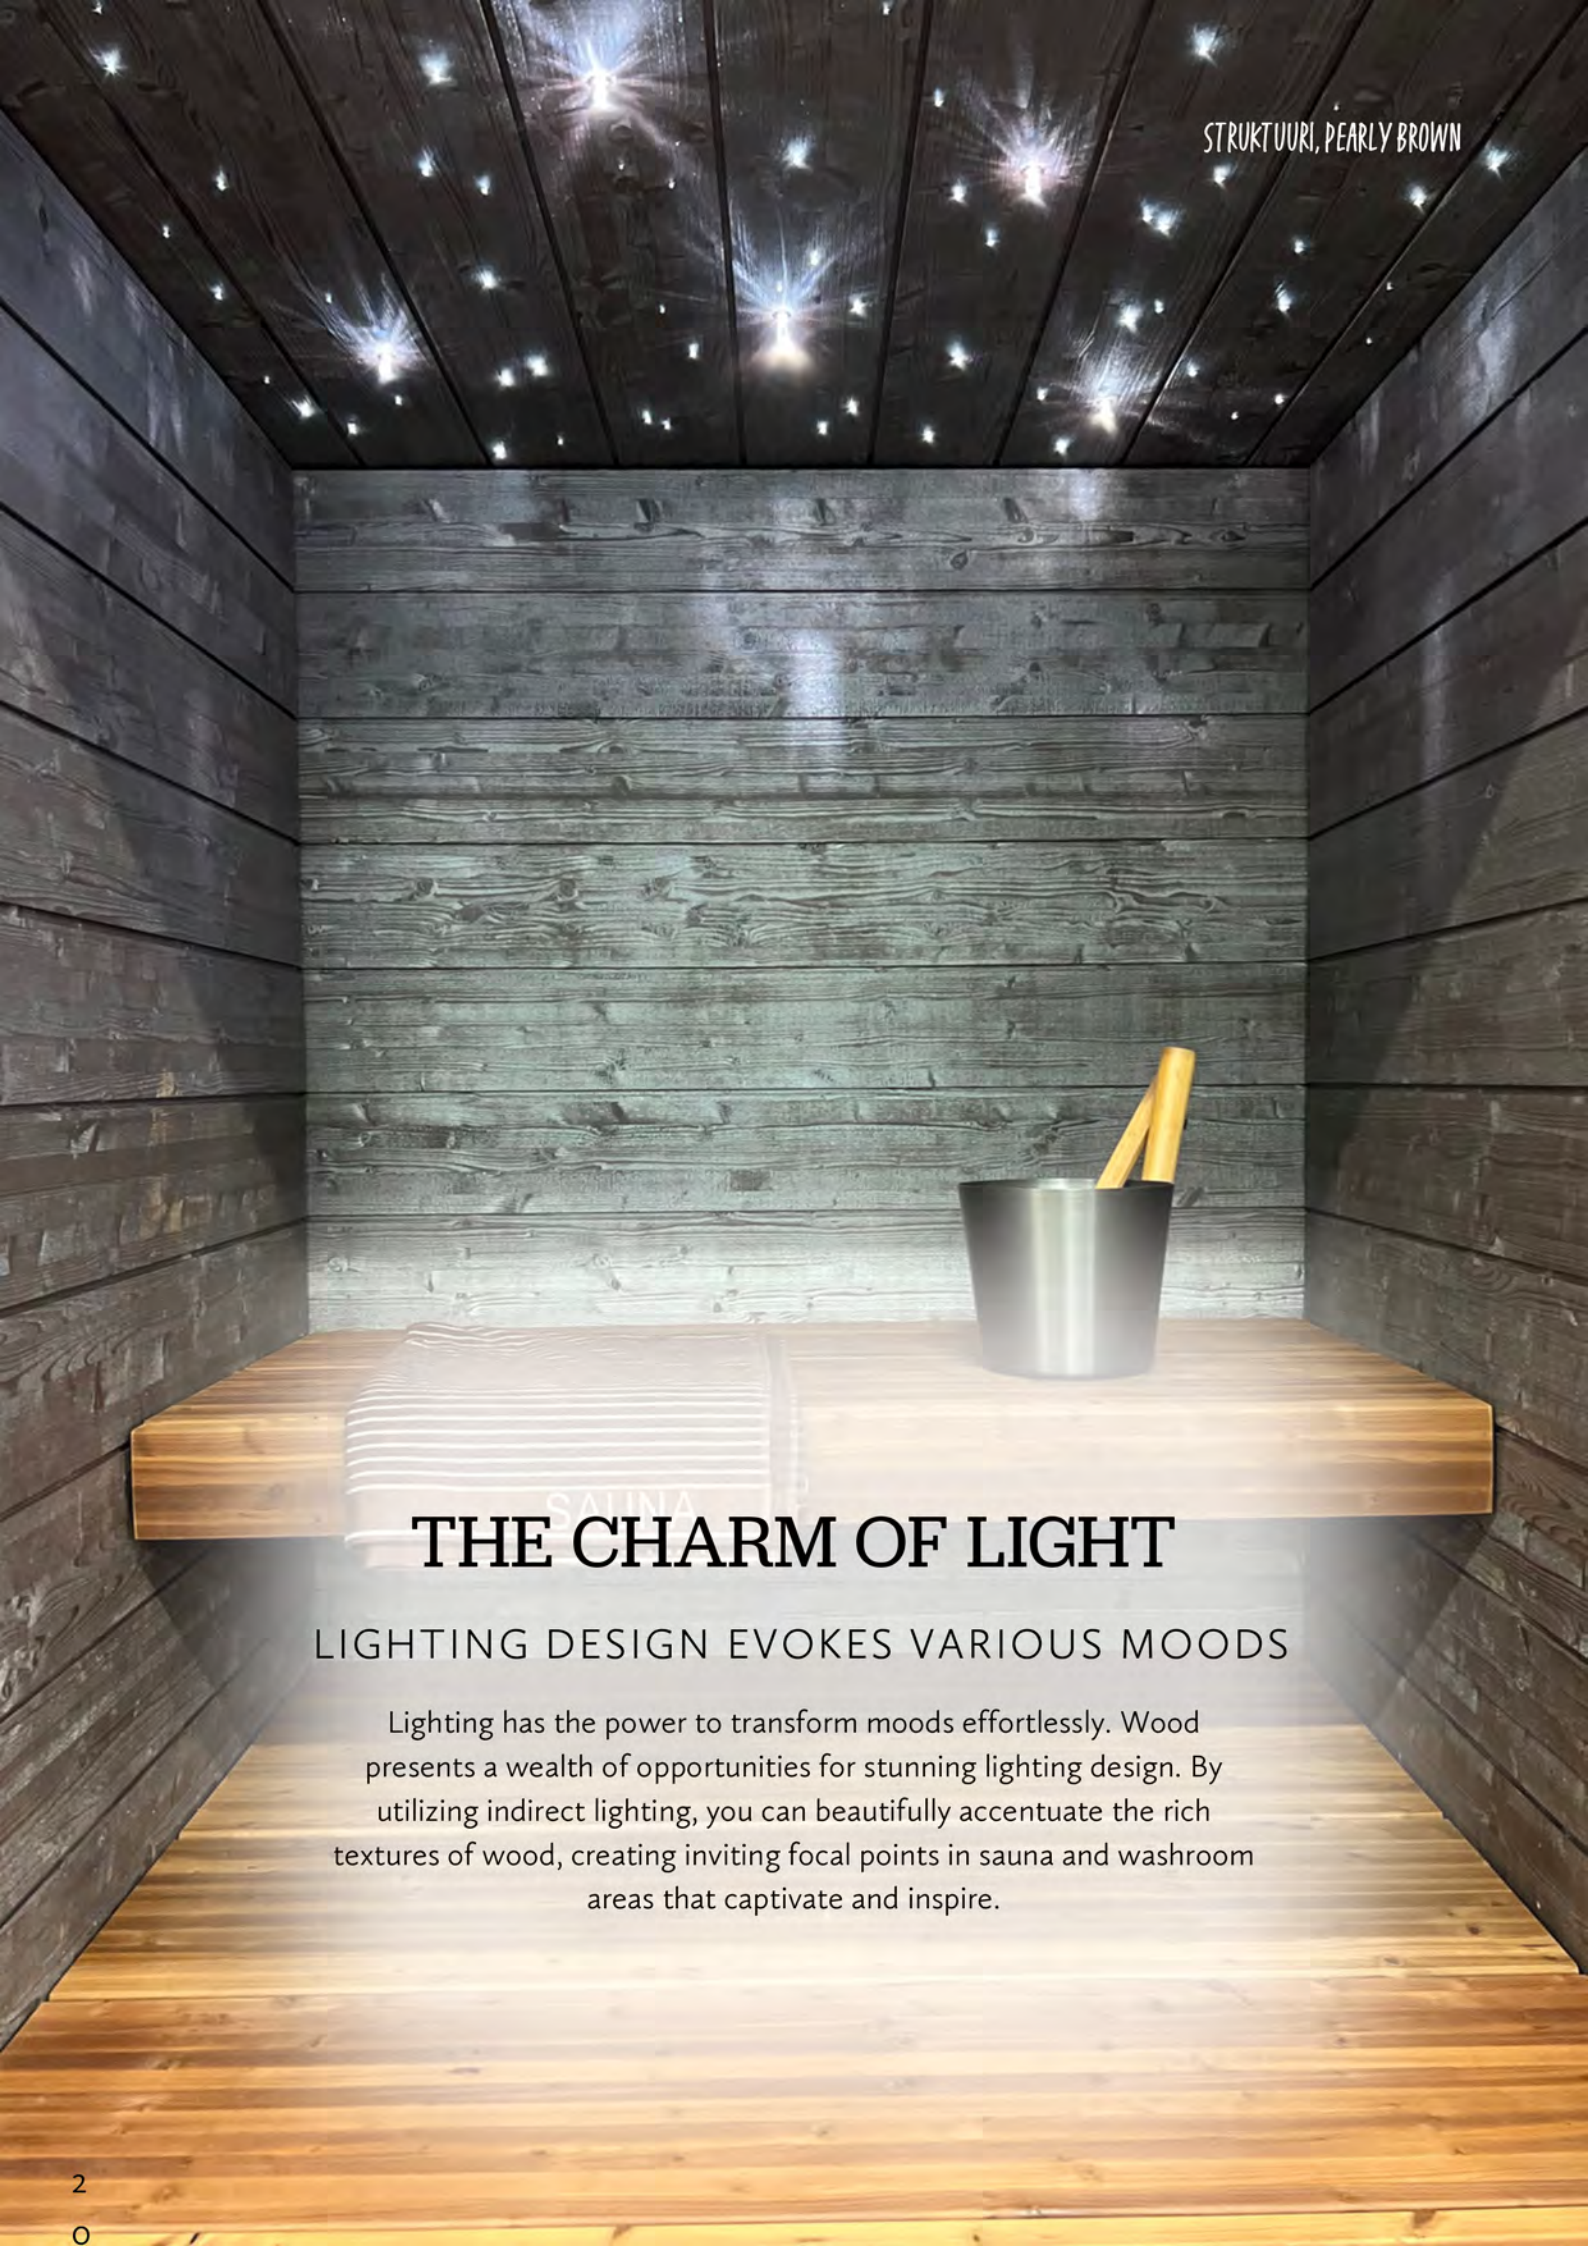

STRUKTUURI, PURE WHITE

TEXTURED SURFACES ADD A SENSE OF LIVELINESS.

STRUKTUURI, PURE WHITE

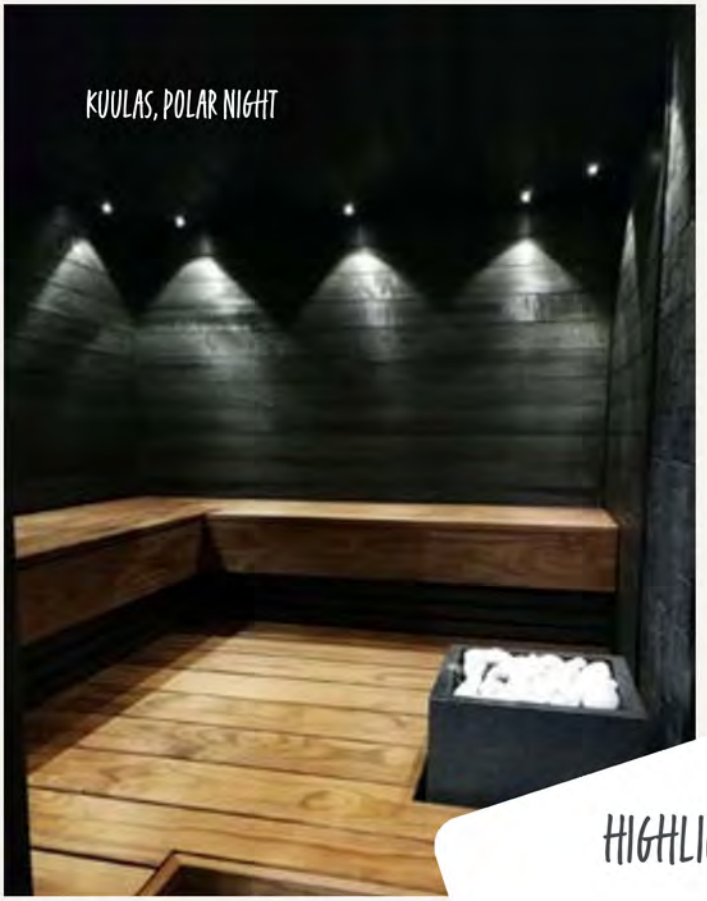

When choosing a panel, it's vital to focus on both color and surface texture. Opting for rough surfaces can create a striking contrast with glossy and smooth materials, enhancing the visual appeal of your design. Moreover, the shimmering beauty of various pearlescent tones stands out remarkably on wooden surfaces, adding depth and elegance to your space.

THE CHARM OF LIGHT

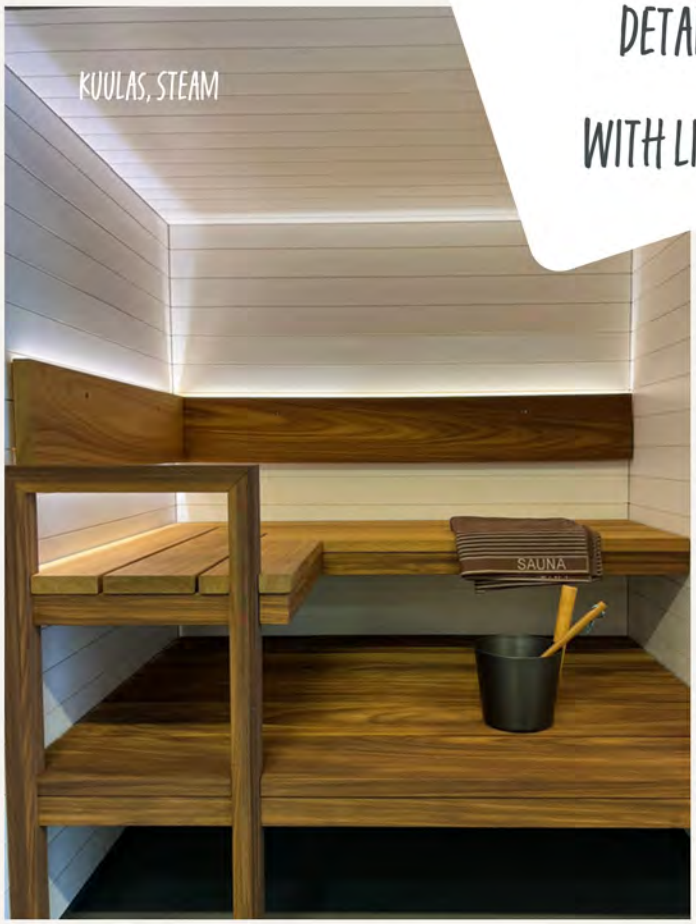

LIGHTING DESIGN EVOKES VARIOUS MOODS

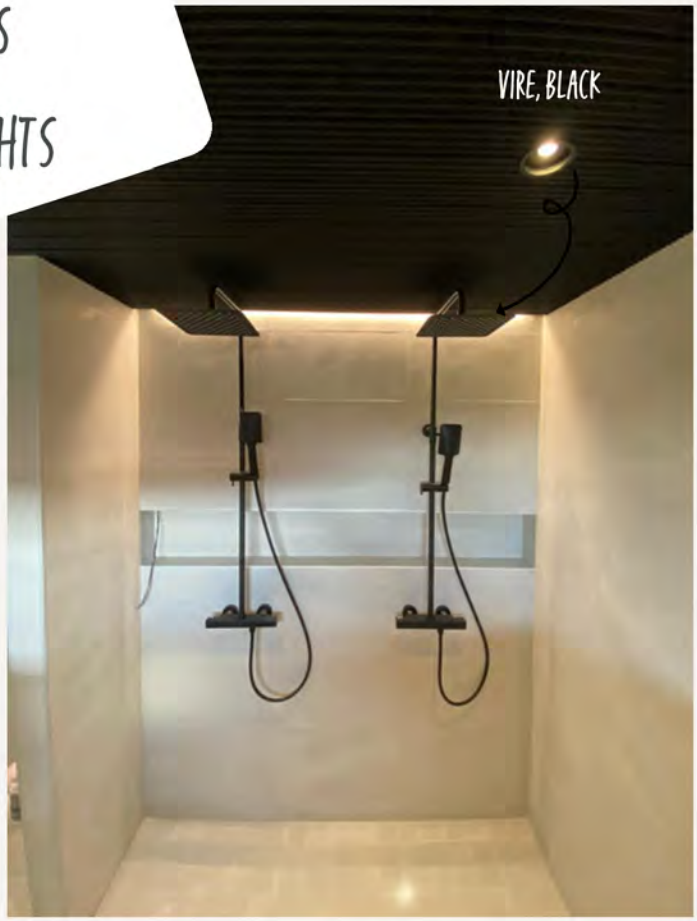

Lighting has the power to transform moods effortlessly. Wood presents a wealth of opportunities for stunning lighting design. By utilizing indirect lighting, you can beautifully accentuate the rich textures of wood, creating inviting focal points in sauna and washroom areas that captivate and inspire.

HIGHLIGHT DETAILS WITH LIGHTS

In sauna lighting design, the possibilities are endless. Imagine how lighting can elevate the contrast between materials and draw attention to intricate details. When planning your lighting, it's vital to address the distinct needs of bathroom areas. In both sauna and bathroom, fine-tuning light intensity is key. A softly lit environment fosters relaxation, while brighter lights ensure easier cleaning. Embrace the potential of thoughtful lighting to create a harmonious and inviting space!

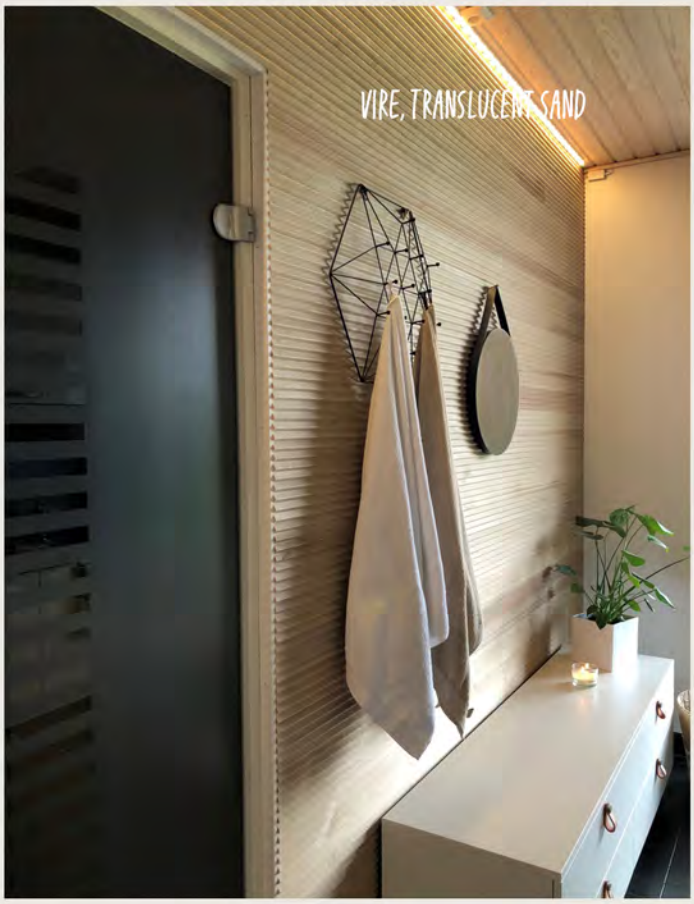

COZY LOUNGES

TIMELESS LOOK WITH NATURAL WOOD

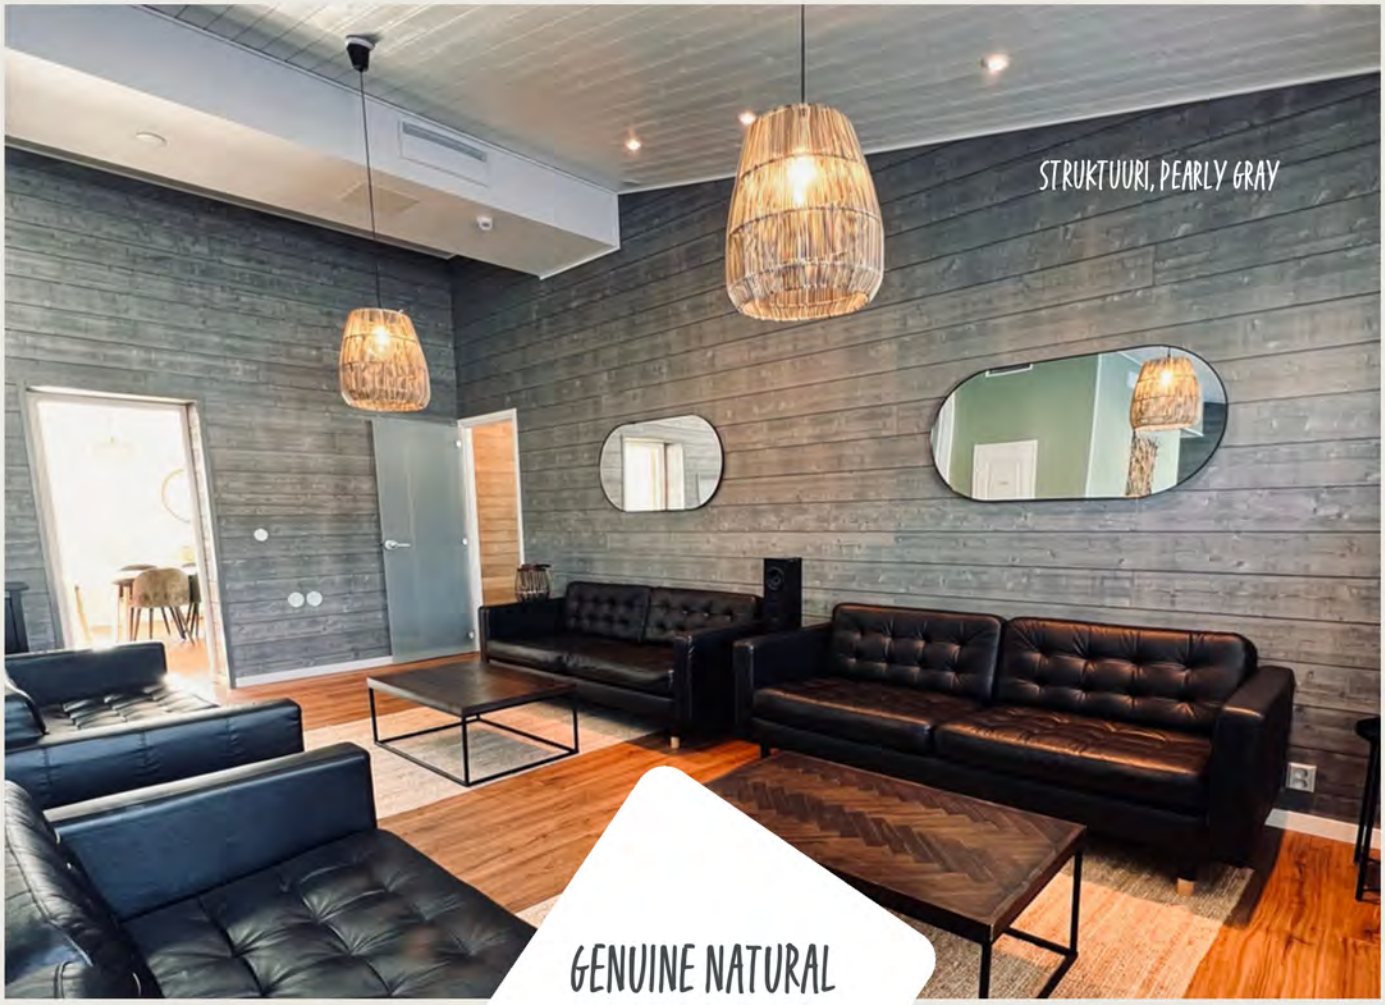

Incorporating wood on both walls and ceilings infuses your interior with inviting warmth. This choice is perfect for lounges featuring fireplaces and any space where you want to unwind, creating a harmonious and cozy environment that enhances relaxation.

Transform your lounges by extending ceiling paneling onto one wall, creating a stunning focal point. Choose between horizontal or vertical installation based on your space. Horizontal panels create a sense of spaciousness by enhancing the room's width, while vertical panels draw the eye upward, emphasizing height and sophistication. Elevate your interior design with this simple yet impactful change!

GENUINE NATURAL MATERIALS

Wood is a remarkable, breathable material that enhances indoor air quality. It naturally regulates humidity by absorbing moisture and releasing it when needed, making it an ideal choice for every room in your home. Embrace the benefits of wood for a healthier, more comfortable living environment.

SUSTAINABILITY

Wood has always been the building material that Finns trust, and we hope to keep it that way. As industry pioneers, we are involved in strengthening a building culture that respects the vitality and health of forests and promotes sustainable and healthy living.

This requires us to continuously and actively develop operating models that promote the well-being of the environment and people. Sustainable development plays an essential role in our business, and product quality, sustainability and safety are the cornerstones of our operations.

In construction, it is important for the products used to be healthy and safe. All Siparila wood products are CE-marked and do not contain chemicals hazardous to humans or nature.

As a building material, wood is a responsible choice, as it is environmentally friendly, renewable, and recyclable. Wood construction is one of the best ways to reduce CO_2 emissions from construction because the CO_2 emissions from wood construction are minimal compared to, for example, concrete structures.

Environmental Product Declarations (EPD) constitute a reliable way to present the environmental effects of products. Siparila's interior cladding panels and thermally modified panels come with EPDs.

Forests are the foundation of the vitality and diversity of Finnish nature. The PEFC certification system ensures the well-being of forests internationally and guarantees that the wood has been harvested sustainably, respecting forest biodiversity. We want to play our part in ensuring that the forest's natural habitats and the opportunities for species to live remain strong now and in the future.
