

KUULAS Sauna panel

KUULAS sauna panels are made of aspen, which is an ideal choice for saunas due to its sap-free nature and slow heat conduction. The translucent finish of the panels effectively protects the wood from dampness and dirt. Furthermore, the concealed fixing of the panels allows for nail-free surfaces and enhances the wood's durability in sauna conditions.

KUULAS Sauna panel

As the surface treatment of KUULAS panels lets the natural annual rings of the wood shine through, there may be tonal variations in the panels' surface coloring. KUULAS panels do not have end-jointing, so they must be cut before installation. It's important to treat cut surfaces to improve the durability of the panel and prevent cracking. The installing waste 10-20 percent.

Steam

Polar night
