

VIRE Interior panel

The three-dimensional VIRE interior panel is designed to add elegance to home interiors. Its wave-like appearance changes depending on the viewing angle, creating a versatile design. VIRE interior panels can be used for both wall and ceiling paneling. Over time, wood patination causes the tones on the panel's surface to darken, especially in translucent tones gradually.

VIRE Interior panel

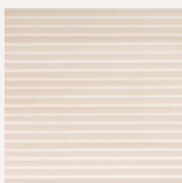

The heartwood of the pine appears as darker areas on the panel's surface, resembling the tone of sand. The translucent tones of VIRE panels may vary between different delivery batches due to variations in the properties of the wood raw material.

The VIRE panels do not have end-jointing, so they must be cut before installation.

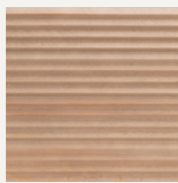

It is important to treat cut surfaces to prevent cracking due to exposure to moisture.

The installing waste 10-15 percent.

Translucent white birch
